

Pharmaceuticals

Inventory management in a Regulated Industry

Key Issues

- Stock movement processes
- Access to information from data
- Production of mandatory reporting to Department of Health
- Management of inventory

Facts at a glance

- Global Employees 90+
- Specializing in providing medicines to patients and medical clinics

FlexSystem Solution

- [Trading Management](#)
- [Financial Management](#)
- [Financial Query](#)

Needs and Challenges

- Management of stock in/out data becoming too labor intensive and time consuming
- Difficult to handle detailed analysis
- Increase process inefficiencies with more automation
- Expired drugs are identified manually
- Requires many manpower and resources to provide reports for Department of Health
- Capture of costs across multiple systems for each delivery
- Delivery of information through reporting to diverse stakeholders including head office and diverse customer purchasing teams

Benefits

- Stock processes and reporting fully automated
- Ability to more tightly manage inventory with impact on profitability
